

Ex./SOC/PG/2.4/2018

**MASTER OF ARTS EXAMINATION, 2018**

(1st Year, 2nd Semester)

**SOCIOLOGY**

**Social Statistics**

**Paper - (2.4)**

Time : Two hours

Full Marks : 30

Attempt any *three* questions.       $10 \times 3 = 30$

1. Answer any *two* questions :       $5 \times 2 = 10$

(a) What do we mean when we say that the null hypothesis acts as a starting point ?

(b) What are the characteristics of the normal curve ?  
What human behavior, trait, or characteristic can you think of is normally distributed ?

(c) Type I and Type II error.

2. (a) All sections of humanities at a large university were given the same final exam. Test scores were distributed normally, with a mean of 72 and a standard deviation of 8. What percentage of students scored between 60 and 69 (grade D) and what percentage scored between 70 and 79 (grade C) ?      8

(b) What is a one-tailed test ?      2

(Turn Over)

( 2 )

3. (a) Mr. white wants to know whether his semester sociology students class average falls within the boundaries of the average score for the large group of students who have taken sociology over the past 20 years. Because he has kept good records he knows the means and the standard deviations for both his group of 36 students and the larger group of 1000 past enrollees. The data are :

Sample = 36

Mean 100

Standard Deviation = 5

Population = 1000

Population Mean = 99

Population Standard Deviation = 2.5

- (b) Interpret sociologically.

6+4

4. (a) Sociologists are long interested in the relationship between religious affiliation and political party affiliation. Traditionally Catholics have aligned themselves with Democratic Party, whereas Protestants were more likely to support Republican candidates. From the following study of 550 registered voters in California test whether Catholics are no more like than Protestants to affiliate with either party.

- (b) Interpret sociologically.

7+3

( 3 )

POLITICAL

AFFILIATION

RELIGIOUS AFFILIATION

|            | CATHOLIC | PROTESTANT | TOTAL |
|------------|----------|------------|-------|
| DEMOCRAT   | 125      | 225        | 350   |
| REPUBLICAN | 75       | 125        | 200   |
| TOTAL      | 200      | 350        | 550   |

5. (a) Define nonparametric.

- (b) The following data show the scores obtained by a group of 20 students on a college entrance examination and a verbal comprehension test. What is the relationship between these two variables ? 2+8

| Student | College entrance exam | verbal comprehension test |
|---------|-----------------------|---------------------------|
| A       | 52                    | 49                        |
| B       | 49                    | 49                        |
| C       | 26                    | 17                        |
| D       | 28                    | 34                        |
| E       | 63                    | 52                        |
| F       | 44                    | 41                        |
| G       | 70                    | 45                        |
| H       | 32                    | 32                        |

(Turn Over)

( 4 )

|   |    |    |
|---|----|----|
| I | 49 | 29 |
| J | 51 | 49 |
| K | 64 | 53 |
| L | 28 | 17 |
| M | 49 | 40 |
| N | 43 | 41 |
| O | 30 | 15 |
| P | 65 | 50 |
| Q | 35 | 28 |
| R | 60 | 55 |
| S | 49 | 37 |
| T | 66 | 50 |

6. (a) Surveys are typically pretested to identify procedural, sampling and wording problems. A telephone interview was pretested using 10 represents in a recent state wide survey of attitudes toward pornography. Calculate measures of central tendency for the variables.

| RESPONDENT | AGE | SEX | ATTITUDE TOWARD |
|------------|-----|-----|-----------------|
|            |     |     | PORNOGRAPHY     |
| 1          | 32  | M   | 19              |
| 2          | 43  | F   | 24              |
| 3          | 21  | F   | 11              |
| 4          | 19  | F   | 30              |
| 5          | 76  | F   | 50              |
| 6          | 50  | F   | 42              |
| 7          | 40  | M   | 17              |
| 8          | 26  | F   | 33              |
| 9          | 21  | F   | 24              |
| 10         | 63  | F   | 47              |

(b) Determine the level of measurement of each variable for each of the research situations :

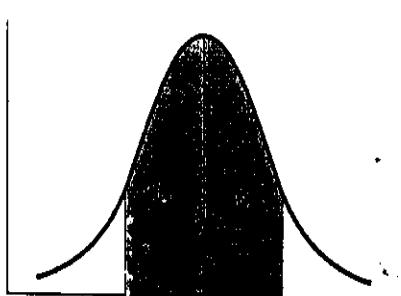

- (i) The administration of your university is proposing a change in parking policy. You select a random sample of students and ask each one of he or she favors or opposes the change.
- (ii) A local automobile dealer is concerned about customer satisfaction. He wants to mail a survey form to all customers for the past year and ask them if they are satisfied, very satisfied with their purchases.      6+4

## Appendix A

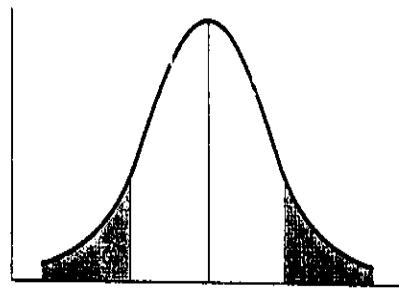

## Area Under the Normal Curve

Column (a) lists Z scores from 0.00 to 4.00. Only positive scores are displayed, but, since the normal curve is symmetrical, the areas for negative scores will be exactly the same as areas for positive scores. Column (b) lists the proportion of the total area between the Z score and the mean. Figure A.1 displays areas of this type. Column (c) lists the proportion of the area beyond the Z score, and Figure A.2 displays this type of area.

**FIGURE A.1 Area Between Mean and Z**

**FIGURE A.2 Area Beyond Z**

# Distribution of $t$

Use this table to find the critical region (step 3 of the five-step model) for test of significance with sample means when sample size ( $N$ ) is small. First, choose an alpha level and a one- or two-tailed test. Then find degrees of freedom to find the  $t$  score that marks the beginning of the critical region.

| Degrees of freedom | Significance levels for one-tailed tests |       |        |        |        |         |
|--------------------|--|-------|--------|--------|--------|---------|
|                    | .05                                      | .025  | .01    | .001   | .05    | .025    |
| 1                  | 3.078                                    | 6.314 | 12.706 | 31.821 | 63.657 | 636.619 |
