## Ex/1-Stat/IIIS/16/2017

## Bachelor of Science Examination, 2017

## (1st Year, 1st Semester)

## STATISTICS (Subsidiary)

Paper - 3-Stat

Full Marks : 50
Time : Two Hours

The figures in the margin indicate full marks.
(Notations/Symbols have their usual meanings)
Answer any five questions.

1. (a) Explain with example what you mean by a price index number. The following table gives the change in the price and consumption of three commodities in the workers' consumption basket. Compute Fisher's ideal index number.

1950
1960

| Commodity | Price <br> (Rs.) | Consumption <br> (Units) | Price <br> (Rs.) | Consumption <br> (Units) |
| :--- | :---: | :---: | :---: | :---: |
| Wheat | 100 | 10 | 110 | 6 |
| Rice | 150 | 15 | 170 | 18 |
| Cloth | 5 | 50 | 4 | 30 |
|  |  |  |  | [Turn over] |

(b) In 1976, the average price of a commodity was $20 \%$ more than in 1975, but $20 \%$ less than in 1974 ; and moreover, it was $50 \%$ more than in 1977. Reduce the data to price relatives using 1975 as base (1975 Price Relative $=100$ ).
(c) Show that the simple aggregative type of index number satisfies the time reversal test but does not satisfy the factor reversal test.
2. (a) What are the tests to be satisfied by a good index number? Prove using the following data that the factor reversal test is satisfied by Fisher's ideal index number :

|  | Rice |  | Wheat |  | Jowar |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Year | Price | Quantity | Price | Quantity | Price | Quantity |
| 1949 | 4 | 50 | 3 | 10 | 2 | 5 |
| 1959 | 10 | 40 | 8 | 8 | 4 | 4 |

(b) Compute chain index numbers with 1970 prices as base, from the following table giving the average wholesale prices for the years 1970-74.

## [ 3 ]

## Average Wholesale Prices (Rs.)

| Commodity | 1970 | 1971 | 1972 | 1973 | 1974 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | 20 | 16 | 28 | 35 | 21 |
| B | 25 | 30 | 24 | 36 | 45 |
| C | 20 | 25 | 30 | 24 | 30 |

(c) Determine the relative importance for the food group, given that the cost of living index number for 1975 with 1970 as base is 175 from the following figures :

Group $\%$ increase in expenditure Weight
Food
Clothing $90 \quad 12$
Fuel etc. $20 \quad 18$

| Miscellaneous | 70 | 10 |
| :--- | :---: | :---: |
| Rent etc. | 150 | 20 |

3. (a) What do you mean by a time series ? Explain the different components of such a series.
(b) For the following series of observations verify that the 4 -year centered moving average is equivalent to a 5 -year weighted moving average with weights $1,2,2,2,1$ respectively.
[ 4 ]

| Year | 1964 | 1965 | 1966 | 1967 | 1968 | 1969 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sales | 2 | 6 | 1 | 5 | 3 | 7 |
| (Rs.'0000) |  |  |  |  |  |  |
| Year | 1970 | 1971 | 1972 | 1973 | 1974 |  |
| Sales <br> (Rs.'0000) | 2 | 6 | 4 | 8 | 3 |  |

(c) What do you understand by Seasonal Indices ? What methods are used to determine them ?
$4+4+2$
4. (a) Fit a straight line trend equation by the method of least squares and estimate the value for the year 1969.
$\begin{array}{lllllllll}\text { Year } & 1960 & 1961 & 1962 & 1963 & 1964 & 1965 & 1966 & 1967\end{array}$
$\begin{array}{lllllllll}\text { Value } & 380 & 400 & 650 & 720 & 690 & 600 & 870 & 930\end{array}$
(b) Find the seasonal indices by the method of moving averages from the following series of observations :

Sales of Woollen Yarn
(Rs. '000)

| Quarter/Year | 1959 | 1960 | 1961 |
| :---: | :---: | :---: | :---: |
| I | 101 | 106 | 110 |
| II | 93 | 96 | 101 |
| III | 79 | 83 | 88 |
| IV | 98 | 103 | 106 |

$5+5$
[Turn over]
[5]
5. (a) Fit a straight line trend to the following data. How would you obtain the monthly trend values from the trend line fitted to the yearly values ? Obtain trend values for December, 1950 and August, 1949.

| Year | 1946 | 1947 | 1948 | 1949 | 1950 | 1951 | 1952 | 1953 | 1954 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Average Profit <br> (million Rs.) | 6.7 | 7.4 | 9.3 | 7.4 | 8.3 | 10.6 | 9.5 | 8.7 | 7.9 |

(b) Using the method of exponential smoothing, find forecasts for the following sales data, taking an initial forecast 25 and a smoothing coefficient 0.4.

| Day | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sales | 26 | 28 | 23 | 27 | 24 | 30 | 26 | 27 |

6. (a) Calculate (i) Crude Death Rate and (ii) Standardised Death Rate of District A, from the following data. Are the two rates equal? If so, why?

| Age Group <br> (years) | Population of <br> District A | Deaths in <br> District A | Standard <br> Population |
| :---: | :---: | :---: | :---: |
| $0-5$ | 1000 | 50 | 10000 |
| $5-10$ | 800 | 20 | 8000 |
| $10-25$ | 1200 | 12 | 12000 |
| $25-45$ | 3000 | 15 | 30000 |
| $45 \&$ above | 4000 | 52 | 40000 |
|  |  |  | [Turn over] |

(b) In the following life table, fill the blanks with the marked with query (?)

| Age $(x)$ | $l_{x}$ | $d_{x}$ | $q_{x}$ | $L_{x}$ | $T_{x}$ | $e_{x}^{0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 83 | 3560 | $?$ | 0.16 | $?$ | $?$ | $?$ |
| 84 | $?$ | $?$ | 0.17 | $?$ | 11975 | $?$ |

(c) Consider the following data :

$$
l_{40}=81685, l_{50}=74528, l_{60}=62170, l_{70}=42091
$$

Smith, aged 40, enters into partnership with Jones, aged 50. What is the probability that the partnership will continue undissolved by death for 20 years? What is the probability that in the next 20 years Jones will die but Smith survive ?
7. (a) Calculate (i) General Fertility Rate (ii) Specific Fertility Rates and (iii) Total Fertility Rate, from the following data. It is given that out of 9000 births, the number of females is 4300 .

| Age group (yrs.) | $16-20$ | $21-25$ | $26-30$ | $31-35$ | $36-40$ | $41-45$ | $46-50$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of women ('000) | 25 | 24 | 20 | 16 | 15 | 12 | 8 |
| No. of live births | 1140 | 3000 | 2740 | 1360 | 600 | 150 | 10 |

(b) Define Gross Reproduction Rate and Net Reproduction Rate. If the Total Fertility Rate is 2006 (per thousand)

## [ 7 ]

and sex ratio at birth is 1 male to 1 female then determine the Gross Reproduction Rate.
(c) Calculate (i) Gross Reproduction Rate and (ii) Net Reproduction Rate from the following data :

| Age group <br> (years) | Specific Fertility Rate <br> per thousand females | Years lived by 1000 <br> new-born girls |
| :---: | :---: | :---: |
| $15-20$ | 140 | 3600 |
| $20-25$ | 250 | 3500 |
| $25-30$ | 240 | 3400 |
| $30-35$ | 190 | 3200 |
| $35-40$ | 130 | 2900 |
| $40-45$ | 50 | 2600 |
| $45-50$ | 20 | 2300 |

Assume that the sex ratio at birth is 98 females per 100 males. $3+3+4$
