

Different parts of the same question should be answered together.

<p>Q1 (8+6+3+8)</p>	<p>(a) Distinguish the repeat Units from the following.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> $\text{---N---C(=O)---NH---CH}_2\text{OH} \quad \text{or} \quad \text{HOCH}_2\text{---NH---C(=O)---N---}$  </div> <div style="text-align: center;"> $\text{H}_2\text{N---C(=O)---NH}_2 + \text{HO---CH}_2\text{---OH}$  </div> </div> <p>(b) Write down the mechanism (show all steps and consider head to head configuration) of addition polymerization considering styrene as monomer.</p> <p>(c) Write down the typical recipe of Emulsion polymerization Or Differentiate Bulk polymerization from Suspension Polymerization</p> <p>(d) Write short note on (any two): (i) Tacticity (ii) Inhibition (iii) Gel point</p>										
<p>Q2 (8+10+4+3)</p>	<p>(a) The following data were obtained in a determination of the average molecular weight of a polymer.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Molecular Weight</th> <th>Weight (g)</th> </tr> </thead> <tbody> <tr> <td>60,000</td> <td>1.0</td> </tr> <tr> <td>40,000</td> <td>2.0</td> </tr> <tr> <td>20,000</td> <td>5.0</td> </tr> <tr> <td>10,000</td> <td>2.5</td> </tr> </tbody> </table> <p>Compute (i) the number average, (ii) the weight average-molecular weight, and (iii) polydispersity of the polymer.</p> <p>(b) A polymer chemist prepared nylon from an amino acid [mol. wt = 200]. Due to improper purification of the reactant, side reactions occurred leading to a 5% stoichiometric imbalance (i.e., 5% excess of one of the functional groups). Calculate:</p> <p>(i). The number-average molecular weight if conversion was 98%.</p> <p>(ii). The number-average molecular weight for the maximum degree of polymerization ($p=1$)</p> <p style="text-align: center;">Or</p> <p>Consider the isothermal solution polymerization of styrene at 60°C in the following formulation: 100 g styrene; 400 g benzene; 0.5 g benzoyl peroxide Assume that the initiator is 100% efficient and has a half-life of 44 h. At 60°C, $k_p = 145$ l/mol-s, $k_t = 0.130$ l/mol-s. All ingredients have unit density.</p> <p>(i). Derive the rate expression for this polymerization reaction.</p> <p>(ii). Calculate the rate of propagation at 50% conversion.</p> <p>(c) (i) Methyl methacrylate and vinyl chloride form an ideal copolymerization at 68°C. What is the composition of this copolymer for a feed composition $f_1 = 0.75$ and $r_2 = 0.1$? (ii) What are the conditions of Azeotropicity.</p>	Molecular Weight	Weight (g)	60,000	1.0	40,000	2.0	20,000	5.0	10,000	2.5
Molecular Weight	Weight (g)										
60,000	1.0										
40,000	2.0										
20,000	5.0										
10,000	2.5										
<p>Q3 (8+5+4+8)</p>	<p>(a) You have been asked to dissolve 0.25 gm of polymer solution in 200 ml of solvent and then find out the molecular weight of the polymer. Given: Flow time_{Polymer soln} = 150 sec; Flow time_{solvent} = 100 sec; Mark-Howink constant = 40×10^{-3} and $a = 0.6$</p>										

	<p>(b) (i) Explain different regions of glass rubber transition of a viscoelastic polymer Or Describe one method of measuring glass transition temperature of a viscoelastic material. (ii) State the effect of Filler and Temperature on viscoelasticity.</p> <p>(c) 21.3 g sample of poly(hexamethylene adipamide) [$M_0 = 113$] is found to contain 2.5×10^{-3} mol of carboxyl groups by both titration with base and infrared spectroscopy. From these data calculate: (i). The number-average molecular weight; (ii). The extent of reaction.</p> <p style="text-align: center;">Or</p> <p>A steady state free radical polymerization is being controlled such that the rate of polymerization is constant at 2×10^{-3} gm of monomer/ml-min. Let the initiator concentration be 6×10^{-6} mol/l. (i) What would be the value of free radical generation and value of X_n? (ii) What % of initiator concentration remains after 3 hrs?</p>
<p><i>Q4</i> (2+3+5+5+10)</p>	<p>(a) (i) What are the different types of screw zones in an extruder and (ii) state the necessity of introducing different types of screw zones. (iii) Show the steps of Calendaring Or Injection molding schematically.</p> <p>(b) State the mechanism of Stretching Or Electro-spinning during polymer membrane fabrication?</p> <p>(c) Describe the Technology involved in (show the process flow sheet): Low pressure process of Poly ethylene manufacturing Or Nylon manufacture</p>
