

Use a separate Answer-Script for each part

No. of Q.	PART – I	
<u>Answer any THREE</u>		
1.a)	State and prove Castigliano's theorem.	
b)	Find the vertical deflection at A of the structure shown in Fig. 1. Assume flexural rigidity EI and torsional rigidity GJ to be constant for the structure.	
		Fig.1
		Fig.2
c)	What will be the instantaneous deflection of an axial member fixed at base, subjected to an impact load P from a height h?	8+8+4=20
2.a)	Find the forces in each member of the truss as shown in Fig. 2. Member AC is found to be 1.4 mm short of required length. The diagonal members are each 900mm <sup>2</sup> and remaining members are 1200mm <sup>2</sup> in area. Take E = 200kN/mm <sup>2</sup> .	
		Fig.3
		Fig.4
b)	Analyze the portal frame as shown in fig. 3 and draw bending moment diagram. Apply strain energy method.	10+10=20
3.a)	Find the fixed end moments and draw the SFD and BMD for a fixed beam subjected to TWO point load P <sub>1</sub> and P <sub>2</sub> at a distance l <sub>1</sub> and l <sub>2</sub> respectively from left end.	12
b)	A Three Hinged Parabolic arch with span 10m, rise 3.0m is subjected to udl of 2KN/m for half the span at right. Find the horizontal and vertical reactions. Also find the bending moment at a distance 2m from left end.	8
4.a)	Solve the Complex truss as in Fig.4 by Henneberg's bar exchange method.	15
b)	Find the rotation angle $\theta_A$ at A when a simply supported beam AB of length L and constant EI is subjected to an external moment M <sub>0</sub> at end A. Use strain energy method.	5

No. of Questions	PART II	Marks
<b>Answer question no. 1 and any two from the rest.</b>		
1.	<p>Find the slope and deflection at point <i>B</i> of given beams (Fig. 1) by <b>Conjugate Beam Method</b>. Given, <math>I=8603.6 \times 10^4 \text{ mm}^4</math> and <math>E=2 \times 10^5 \text{ N/mm}^2</math></p> <div style="text-align: center;"> <p><b>Fig. 1</b></p> </div>	12
2.	<p>Determine the force in each member of the truss shown in Fig. 2. All members have the same cross-sectional area.</p> <div style="text-align: center;"> <p><b>Fig.2</b></p> </div>	14
3.	<p>Find the slope and deflection at points <i>B</i> and <i>D</i> of given beam (Fig. 3) by <b>Moment Area Method</b>.</p> <div style="text-align: center;"> <p><b>Fig.3</b></p> </div>	14

4. Evaluate the slope and deflection at point *B* of given beam (Fig. 4). Use **Double Integration Method**.
